enhanced to 2,000 MW with a combined investment of Rs 9,000 crore. However, it was eventually shelved due to costly imported coal, protests from environmental activists over emissions and uncertainty in gas availability.

In 2008, Tata Power gained a foothold in the Australian renewable energy market when it took up an 11.4 per cent holding in Geodynamics Limited. The company also bought a 26 per cent stake in a 114 MW hydro-power project in Bhutan by entering into a ‘partnership with the Royal Government of Bhutan through Druk Green Power [Corporation]’ to generate power at the Indian-Bhutan border and transmit it to Delhi.

That year, Ratan also gave a ‘major thrust’ to the TBEM initiative within the company. Developing a seven-step Organizational Transformation (OT) model, he called for the company to identify it as ‘as one of the critical success factors to achieve our strategic intent’. The OT model focused on ‘developing competencies for current and future needs, creating a culture of continuous improvement, customer centricity, innovation, teamwork, and higher levels of integration between current businesses and project teams’.

In 2010, Tata Power announced its ‘strategic intent of attaining an installed capacity [of] 25000 MW’ in the next seven years. The company stated that it intended to achieve that goal ‘sustainably and with care’ and ‘laid out an eight-fold path in sustainability’ that focused on ‘developing [a] renewable energy portfolio, investing in cleaner technologies and reducing its carbon footprint’. In the same year, Tata Power signed a MoU with Korea East West Power Company to explore and execute maintenance and operation ‘opportunities relating to third party generation assets’ in Africa, the Middle East and Asia.

In 2012, Tata Power’s first 25 MW solar power plant in Gujarat was commissioned, along with a 1,050 MW power project in Maithon. This project resulted in Tata Power becoming the country’s first ‘power company to have PPPs (public-private partnerships) in Generation, Transmission and Distribution’.

The same year, Tata Power entered a 50:50 JV agreement with a South African company called Exxaro Resources Limited to launch Cennergi Private Limited. The venture focused on developing electricity generation projects in Botswana, Namibia and South Africa. The participation in the projects in the African continent was in alignment with Ratan’s
