wholly owned subsidiary of TASL, focuses only on delivering manufacturing solutions to customers in the aerospace sector. TASEC offers homeland security solutions which include cyber security, physical security and OT security, while NOVA 'engages in design, development, manufacture, integration and life cycle support of defence systems' and 'provides customized technical solutions to Indian Defense, Paramilitary Forces, Civilian Requirements, International OEMs and System Integrators'.

In a short time, TASL succeeded in earning the confidence of large international defence contractors so much so that by 2019, it was implementing projects for at least twelve overseas producers of military and as many contracts for the various agencies of the Indian defence security apparatus, says Singh. The success of the enterprise is evident in the sharp rise in its consolidated revenue from 2010 to 2019—in less than a decade, its revenue grew from Rs 2 crore to Rs 843 crore (though most of it came on account of the integration of various units with TASL) with the lion's share coming from exports. TASL's success also means that it could be used as a learning module by the other entities that constitute the Tata A&D.

In the light of TASL's success in getting defence projects, it may not be far-fetched to conclude that it may grow to become another jewel in the crown of Tata Sons. With the increasing emphasis on indigenization of defence production, its role in security projects will steadily rise, as it has done recently. As a division of the integrated Tata Group, TASL will be able to draw from the diverse capabilities—from software to steel—from the companies under Tata Sons. It could bring to the nation an aggregated capability that no other Indian company can summon. Even the largest of the defence companies in the world—though they may have access to greater technology—cannot claim as wider a repertoire of in-house capabilities as TASL can source from the group.

After the push for self-reliance made under the 'Atmanirbhar Bharat Abhiyaan or Self-reliant India' goal, emphasizing the importance of Make in India, TASL won the largest defence contract awarded so far to a private sector company in the country. It bagged the Rs 22,000 crore contract for the supply of fifty-six C-295 military aircraft in September 2021. With the defence expenditure growing 9 per cent in ten years (2011–21), TASL may be positioned to reap the winds of the ambition of a nation in the throes of achieving great power status, serving to fill a critical gap in India's needs,
