12.4.2 Sampling

Designing and sampling are the main process in garment industry and it has a vital role in attracting buyers. The buyers generally places the order after they are satisfied with the quality of the samples. The samples decide the ability of an exporter. The buyer will access the exporter and his organisation only by the samples. The purpose of sampling is not only to get bulk orders and also give some additional benefits to the exporters. By doing sampling the exporter can estimate the yarn consumption for developing the fabric, a clear idea on costing and more over the manufacturing difficulties. There are different phases of sampling; the first phase covers the development of the initial concept or design idea through its approval by the customer. The second phase covers the process following acceptance of the first prototype sample and includes the functions of sourcing and ordering component, testing the product and carry out trails and finalized sample specifications. The third and final phase phase includes a range of activities that are carried out before large scale or bulk production capacity outside the home producer or developers wherever this is applicable.

12.4.3 Fabric and Accessories Store Department

After receiving purchase order from the buyer merchandiser plans and issues purchase order for buying raw materials like fabric, buttons, thread, and for dyeing, printing, embroidery and other accessories. These raw materials' are checked for colour, quality and then approved by the merchandiser.

DO YOU KNOW?

What are the most important fashion centres?

- USA - New York- Garment District (Madison Avenue)
- UK - London - British Fashion Council
- FRANCE - Paris-Chamber Syndic ale
- ITALY - Milan- Alta Moda
- GERMANY —Interstoff trade shows in May and November.
