It produces crimson and scarlet colours. These dyes possess good fastness to light and washing.

Animal dyes are also obtained from murex snail (purple colour) and Octopus/ Cuttle fish (Sepia brown).

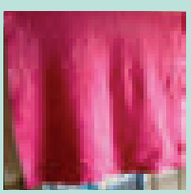

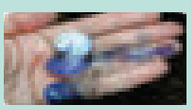

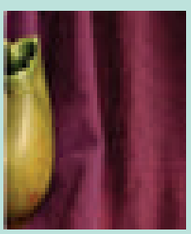

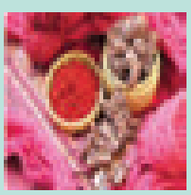

How invention of colour changed the world?

William Henry Perkin, in 1856 during his experimentation with coal tar to synthesize an artificial quinine as a cure for malaria invented the first synthetic dyestuff called "Mauve" which revolutionized the world in both dye making and fashion.

Lac dye		

What is Tyrian purple dye?

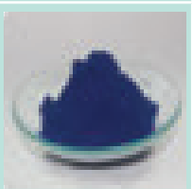

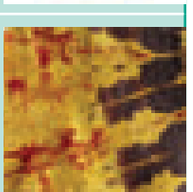

Tyrian purple is a natural dye obtained from shellfish. Approximately 8500 shellfish is used to produce one gram of purple dye. Hence the dye was more worth than its weight in gold.

2.2.4 Mineral Dyes

Dyes extracted from mineral sources are called as mineral dyes. Most widely used mineral dyes are Iron, which produces yellowish brown shades, chrome yellow, prussian blue and manganese brown. The dyes obtained from mineral sources may be poisonous and hence are not being used commercially.
