DO YOU KNOW?

In Russia it's considered a criminal offense to drive with a dirty car. 16% of people never wash their car.

like a springboard. The road disturbance is absorbed by spring deflection. Multiplate shock absorber is used to dissipate the stored energy in spring. This type of suspension system usage is very limited in vehicles, it is because of the maintenance and repair of this suspension system are complex in nature.

7.3.2.4 Mac Pherson Strut types

Constructions are shown in the figure 7.3.2.4.

Introduction

It is named after American automotive engineer Earle S. Mac Pherson, who originally invented and developed the design. It is widely used in the front suspension vehicles. The MacPherson Strut type suspension system consists of with a telescopic strut and a single arm along with a diagonal stay. Lower Wishbone arm is alone available in this system. Shock absorber and spring are
