Evaluation

SVK79K

PART - A

One mark questions

Choose the correct answer

1. In leaf spring, one end of the spring is fixed and the other end of the spring is attached to _____
   a) U - bolt
   b) I - bolt
   c) Shackle
   d) Axle shaft

2. The up and down motion of the vehicle is called as _____
   a) Damping
   b) Bouncing
   c) Pitching
   d) Rolling

3. Energy stored in the coil spring during
   a) Compression
   b) Straightening
   c) Expansion
   d) Bending

4. Hydraulic damper is working based on the principle of
   a) Newton Law
   b) Principle of Lever
   c) Principle of friction
   d) Pascal Law

5. In which type of vehicle, helper springs are used?
   a) Light vehicles
   b) Heavy vehicles
   c) Two wheeler
   d) Three wheeler

PART - B

Three mark questions

1. State the requirements of a suspension system?
2. Classify the types of leaf spring?
3. Write short notes on helper spring.
