

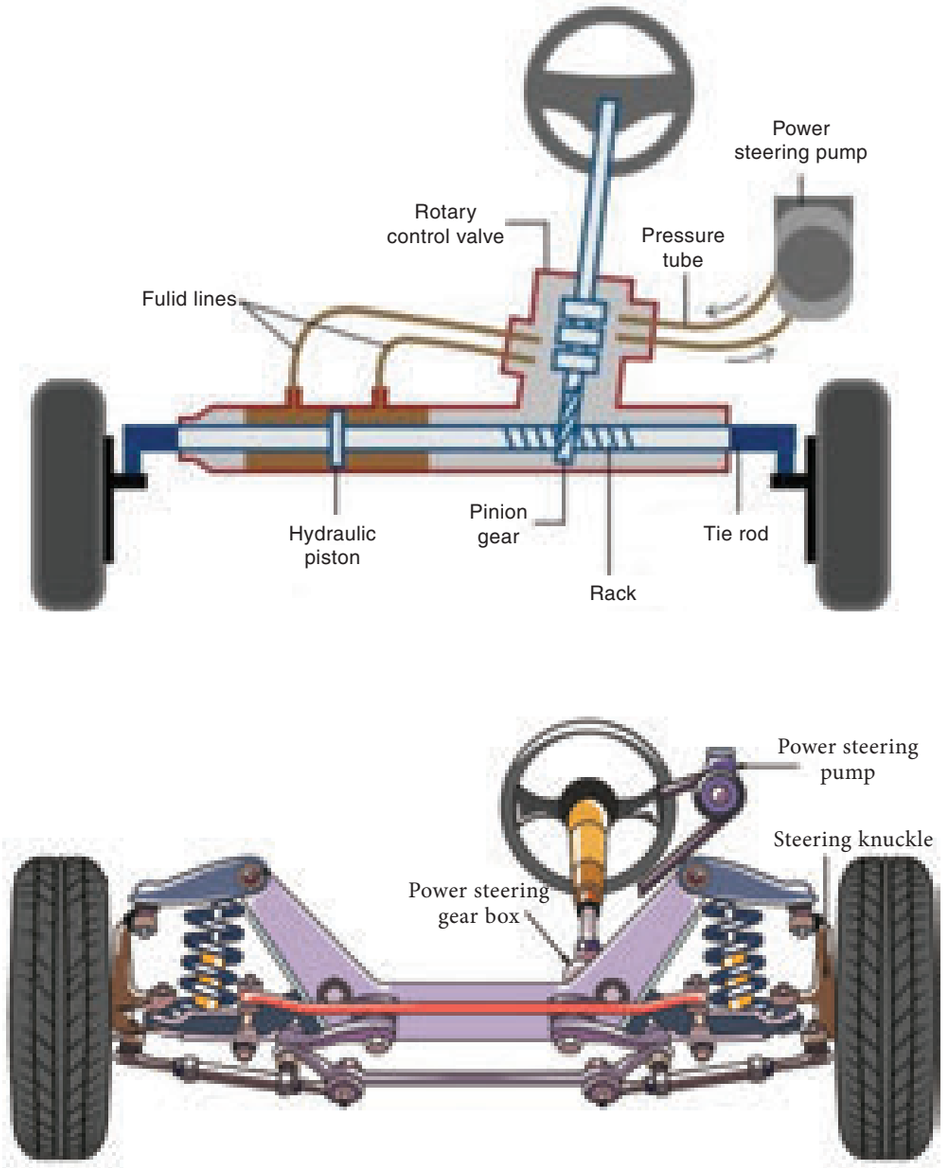

Figure 8.4 Power steering

steering system. Most automotive power steering system are hydraulic.

- A pump supplies high pressure fluid when the driver turns the steering wheel. This provides 80% of the required steering effort and the remaining 20% is by driver's physical effort.

Types of Power steering

1. Integral type
2. Linkage type

8.5 (a) Reversible Steering

- Steering gear is said to be reversible if the deflection of steered wheel due to road surface is transmitted through steering linkages and steering gears to the steering wheels.

(b) Irreversible Steering

- Steering gear is said to be irreversible if the deflection of steered wheel due to road surface is not transmitted
