charging system and other electrical accessories. Electrical energy for all the system is provided by the battery. Battery is known as heart of the electrical system.

9.2.3 Materials Used for the Chassis Frame

Frame should be extremely rigid and strong so that it can withstand shocks, twist, stresses and vibrations when vehicle is moving on road. The chassis frame should be made from high strength materials. The following materials are widely used for the manufacture of the chassis frame.

1. Mild sheet Steel
2. Carbon sheet Steel
3. Sheet Nickel Alloy

The chemical composition of nickel alloy steel is

Carbon – 0.25% - 0.35%

Manganese – 0.35% - 0.75%

Silicon – 0.30%

Nickel – 3%

Phosphorus – 0.05%

Sulphur – 0.5%

9.3 Important dimensions of the vehicle

1. Wheel base

- Wheel base is the distance between the centres of the front and rear wheels.
