

DO YOU KNOW?

In 2017, Rolls-Royce unveiled a one-off custom build called the Sweptail. At a reported price of nearly $13 million, it is believed to be the most expensive new car ever.

10.8 Engine starting system

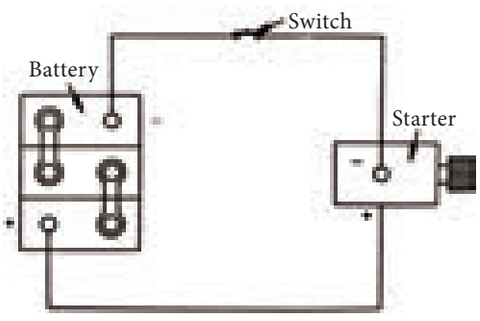

Figure 10.8 Engine starting circuit

The system which is used to start the engine is called as Starting system. In olden days, a handle is inserted and rotated in the crankshaft and thus the engine was started. Now, to crank the engine D.C. motors are used. The electrical energy from the battery is converted into mechanical energy by the D.C. Motor. The D.C. motor pinion is coupled with the ring gear in the flywheel and thus the engine is started.
