4.14 Propeller shaft-Trouble shooting

Improper rotation of the propeller shaft

S.No	Causes	Remedies
1.	There will be bend or twist on the shaft.	Need to rectify the run out by using the dial tester.
2.	The Propeller shaft may be unbalanced.	Need to inspect the shaft to bring it to its correct position.
3.	Wear occurred in splines, bearings and slip joints.	Inspect and replace the worn out parts.

More noise from propeller shaft assembly

S.No	Causes	Remedies
1.	The shaft might be bent or twisted	Inspect the shaft and fix it.
2.	Absence of lubricating oil in the propeller shaft unit .	Lubricate the shaft unit using the lubricating oil.
3.	Deposition of dust particles inside the bearings.	Need to clean it.
4.	Worn out of the splines.	Inspect and replace with a new one.

Over noise coming from differential unit

S.No	Causes	Remedies
1.	Insufficient amount of lubricating oil in the differential casing.	Need to pour required amount of lubricating oil in casing.
2.	Because of the usage of low grade lubricating oil.	Need to use good quality lubricating oil.
3.	There may be broken teeth in the pinion and bevel gears in the differential unit.	Find and replace with a new one.
4.	Insufficient gap between the gear mating points.	Need to correct with sufficient gap between the gear mating points
5.	Bearings might be broken in the differential unit.	Replace with new bearings.
6.	Cage unit might be slightly loosened with the crown wheel.	Connect them tightly.
7.	Washers might be broken or worn out in the differential unit.	Need to change with new washers.
8.	The spider or gears may have worn out or broken in the differential unit.	Need to change with a new one.
9.	The gears teeth may not be connected properly in the differential unit.	With the help of marking point make the connection between gear teeth and fix it.
