## 5.5 Tyre

Tyre is fixed on the rim of wheel in the vehicle. The tube in the tyre is filled with air. The tyre carries the weight of the vehicle and gives smooth ride to the vehicle.

### 5.5.1 Types of tyre

The tyre are classified into the following types,

1. Solid tyre
2. Pneumatic tyre
3. Bullet proof tyre
4. Liquid filled tyre

#### Solid tyre

This type of tyre is a hard one made up of special type of rubber. There is no tube in it. As it is a solid one it does not withstand vibrations. Hence this type of tyre is mostly not used in automobiles.

**Figure** View of a Solid Tyre

#### Pneumatic tyre

This type of tyre is used commonly in all automobiles. The air is filled in the tube of the tyre and hence the tyre is called as pneumatic tyre. The photographic view of a pneumatic tyre can be seen in Figure.

**Figure** Photographic view of a Pneumatic Tyre

The pneumatic tyre can be classified into two types. They are

1. Tyre with tube
2. Tubeless tyre

#### Tyre with tube or conventional tyre

The tube assisted tyre is called as the tube tyre. The photographic view of a tube tyre. The cross sectional view of the tube tyre can be seen in the Figure.
