- Physical examination
- Chest X-ray reveals findings consistent with silicosis
- Pulmonary function testing: may reveal airflow limitation, restrictive defects, reduced diffusion capacity, mixed defects or may be normal (in uncomplicated)

Management

Silicosis is an irreversible condition with no cure. Management options currently focus on alleviating the symptoms and preventing complications. These include:

- ❖ Stopping further exposure to silica and other lung irritants, including tobacco.
- ❖ Cough suppressants
- ❖ Antibiotics for bacterial lung infection
- ❖ TB prophylaxis for those with positive tuberculosis skin test
- ❖ Chest physiotherapy to help the bronchial drainage of mucus
- ❖ Oxygen administration to treat hypoxemia, if present
- ❖ Bronchodilators to facilitate breathing
- ❖ Lung Transplantation

Nursing Management

- ❖ Providing nursing care in the acute and chronic stages
- ❖ Health education regarding the prevention of the disease

Prevention

- ❖ Rigorous dust control measures like wearing mask improving the ventilation of work place
- ❖ Water spray is often used where dust is present
- ❖ Dust can also be controlled by dry air filtering

3.11.2 Computer Vision Syndrome

About two hundred years before, the word "computer" started to appear in the dictionary. Some people even didn't know what is a computer? However, most of the people today not just knowing what is a computer, but understand how to use a computer. Therefore, computer becomes more and more popular and important to our society. We can use computer everywhere and they are very useful and helpful to our life. But still we are facing a problems like computer vision syndrome. Let us learn in detail.

Computer vision syndrome (CVS) is strain on the eyes that happens when you use a computer or digital device (Smart phone, Tablets, Laptop) for prolonged periods of time.
