green leafy vegetables, dry fruits, jaggery, certain beans.

Daily requirements: 25-40 mg

Functions

- Component of hemoglobin and myoglobin
- Helps in oxygen transport and cellular respiration

Iron is better absorbed with vitamin C and absorption delayed with tea or coffee.

Iodine

Iodine is considered as an important for maintaining metabolic rate.

Sources: Iodized salt, salt water fish, milk, meat cereals and green leafy vegetables.

Fortification of common salt with potassium iodate is a recommended method of making iodine easily available.

Daily requirements: 01.05 mg

Functions

- Iodine is an important constituent of thyroxine, the hormone secreted by the thyroid gland
- Iodine is responsible for the regulation of physical growth

A goiter is a swelling in the neck resulting from an enlarged thyroid gland. A goiter is associated with a thyroid that is not functioning properly. Worldwide, over 90% of goiter cases are caused by iodine deficiency.

Magnesium

Human body contains about 25gms of magnesium. Half of it is present in bones and in combination with phosphate and carbonate and about 1/5th in soft tissues.

Functions

Constituent of bones and teeth, coenzymes in general metabolism, smooth muscle action.

Sources of Magnesium: Dairy products (excluding butter) fresh green vegetables, meat, nuts, sea food and legumes are good sources of magnesium.
