The Circulatory Changes After Birth:

- The Placenta is replaced by the Lungs as the organ of respiratory exchange.
- The lungs and pulmonary vessels expand thereby significantly lowering the resistance to blood flow. Subsequently the pressure in the pulmonary artery and the right side of the heart is decreased.
- The pressure of the left side of the heart increases.
- The increasing pressure of blood in the left side of the heart decreases the vascular resistance of the lungs, therefore, the blood now enters the lungs for a respiratory exchange.
- **Closure of the Ductus Venosus** – functional closure occurs within few minutes of birth and becomes as ligamentum venosum.
- **Closure of ductus arteriosus** – is by smooth muscle contraction and it is further replaced by fibrous tissue, called ligamentum arteriosum.
- **Closure of the Foramen Ovale** – closes at birth due to decreased flow from placenta and Inferior Vena Cava to hold open foramen. It become as fossa ovalis

5.9 ANTENATAL CARE

Every pregnancy needs special care. All pregnant women should be registered and encouraged for institutional delivery. Causes of maternal mortality are preventable by the good antenatal care

Causes of Maternal Mortality in India

On first antenatal visit	
1- Confirm Pregnancy	Confirm pregnancy by pregnancy test or Ultra Sound.
2-History collection	Ask Personal history which includes Name, Age, husband name, marital status, family income, Address etc Menstrual history includes ; ➢ - 1-Last menstrual period (LMP). ➢ - 2-Regularity and frequency of menstrual cycle. ➢ - 3-Contraception method used . ➢ - 4-Calculate expected date of delivery (EDD) as = first day of LMP + 9 months +7 days
Student activity: Calculate EDD for following LMP 1.Oct 12th 2018 2.Nov 7th 2018 3.Dec 20th 2018	**Example of calculation of EDD** Mrs. Radha 22 yrs pregnant with 16 weeks (4 months). Her Last Menstrual Period (LMP) is may 5th 2018. Then The EDD will be Feb 12th 2019.
