Nonmedicated intrauterine devices or first generation IUDs

These are made out of polyethylene or other polymers they actually entered market in different shapes and sizes they are Loops, Spirals, Coils, Rings, Bows. The lippes loop is the popularly known and commonly used device in the developing countries.

Medicated IUDs

The copper IUDs are named as second generation IUDs there are several forms of copper devices available now

Newer Devices

Variants of the T device

- Cu-T-220C
- Cu-T-380 A or Ag
- Nova T
- Multiload devices ML-Cu-250, ML- Cu -375

Advantages of Intra Uterine Devices (IUDs)

- This is the most cost-effective method
- Easy to use
- There is no interruption of intercourse
- It can be removed immediately incase of any problems or not required
- Fertility returns with the first ovulation cycle following IUD removal

Disadvantages

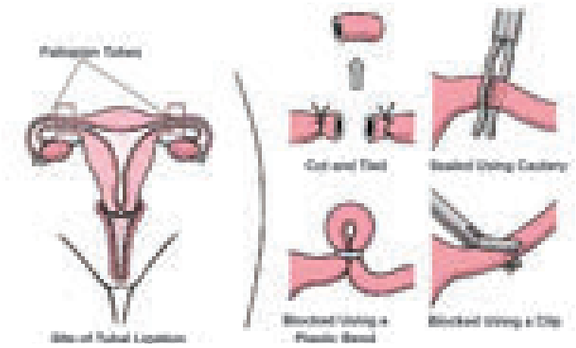

- IUDs do not protect against STDs
- Needs clinician for insertion and removal
- It may lead to side effect in some women

II Permanent Methods of Family Planning

a. Female Sterilization

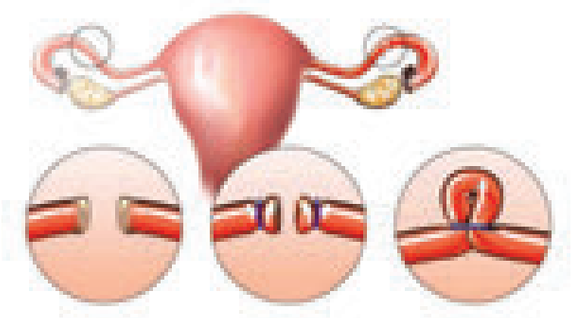

Laparoscopic Sterilization

Female sterilization is performed through abdomen using a laparoscope, the laparoscopic tubal ligation is a surgical sterilization method in which female's fallopian tubes are clamped or cut.

Mini-lap (Mini Laparotomy) Operation

A small abdominal incision measuring 2.5-3 cm is performed under local anaesthesia through the small incision, by following the fundus of the uterus fallopian tubes are reached and hooked up, knots are applied in two places this procedure is repeated for both the tubes.

Advantages

- It is a permanent method to prevent unintended pregnancies
- It is effective immediately
- Does not need any daily attention
