EVALUATION

HEGV2F

I Choose the correct answer:

1. Which of the following statements about hormone regulation of the female reproductive cycle is false?

   a. LH and FSH are produced in the pituitary, and estradiol and progesterone are produced in the ovaries.

   b. Estradiol and progesterone secreted from the corpus luteum cause the endometrium to thicken.

   c. Both progesterone and estradiol are produced by the follicles.

   d. Secretion of GnRH by the hypothalamus is inhibited by low levels of estradiol but stimulated by high levels of estradiol.

2. Which of the following statements about the menstrual cycle is false?

   a. Progesterone levels rise during the luteal phase of the ovarian cycle and the secretory phase of the uterine cycle.

   b. Menstruation occurs just after LH and FSH levels peak.

   c. Menstruation occurs after progesterone levels drop.

   d. Estrogen levels rise before ovulation, while progesterone levels rise after.

3. The amniotic cavity develops:

   a. on the tenth day

   b. Within the outer cell mass

   c. Within the inner cell mass near the cytotrophoblast

   d. in extra embryonic mesoderm

4. The following organs are derived from mesoderm EXCEPT:

   a. Skeletal musculature

   b. Cardiac musculature

   c. Suprarenal cortex

   d. Suprarenal medulla

5. The part of the sperm containing proteolytic enzymes to digest the zona pellucida is the:

   a. capacitor b. head

   c. corona d. acrosome

6. During the second week of development, the trophoblast differentiates into:

   a. syncytiotrophoblast

   b. ectoderm

   c. intraembryonic mesoderm

   d. yolk sac (secondary)

7. What is the 'baby' called between 0-8 weeks pregnancy

   a. Peter b. Embryo

   c. Fetus d. Alien
