6.6.5 Dietary need

Growth requirements combined with physical activity play a role in determining a child's nutritional needs. Nutritional needs change with different life stages. It is important to take into account the extra demands placed on the body by these changes.

	Toddler	preschool	School age
Calories (kcal)	1200/day	1500-1600/day	2000-2500/day
Protein	1gm/wt/day	1gm/wt/day	1gm/wt/day
Fluid	1100ml/day	1500 ml/day	2100 ml for boys; 1900 ml for girls
Type	Small frequent chopped food	Food in various colours and shapes	All types of food increased quantity

Food pyramid

Foods to be avoided for children

1. Fast food and junk food like chips, popcorn etc
2. Processed meats
3. Canned fruits and drinks
4. Honey
5. Dipping sauces
6. Raw milk and eggs

STUDENT'S ACTIVITY

Mrs. Ranjitha and her 3 months baby visited the paediatric clinic with the question of

i. When should I introduce solid food to my baby?
ii. Which solid food should I feed my baby first?
iii. What can I do to minimise the risk of food allergies?
iv. How do I introduce each new food to my baby?
v. What are the signs of a food allergy?
vi. Do I still need to give my baby breast milk or formula
vii. How can I help my child to develop healthy eating habits?

Prepare answers for these questions.

6.7 IMMUNIZATION

Immunization against vaccine preventable diseases is essential to reduce the child mortality, morbidity and handicapped conditions. It is mass means of protecting large number of children from various diseases.

Definition

Immunization is the process of protecting an individual from diseases through introduction of live /killed/attenuated organisms in the individual system.

6.7.1 Vaccine preventable Diseases

a) Six killer vaccine preventable diseases

- Poliomyelitis
- Tuberculosis
- Diphtheria
