7.8.2 Preventive Services

- Primary prevention : refers to prevention of disease (e.g., immunization, chemoprophylaxis)
- Secondary prevention: is the early detection of disease before it becomes symptomatic (e.g. mammography to detect early breast cancer)
- Tertiary prevention: refers to activities to optimize health once disease is already detected.

Primary Prevention

Definition

Primary Prevention is concerned with preventing the onset of disease it aims to reduce the incidence of disease.

a. Councelling, life style modification

- Diet
- Physical activity
- Safety and injury prevention
- Smoking cessation
- Dental care

b. Immunizations

Secondary Prevention

Definition: Secondary prevention aims to reduce the impact of a disease or injury that has already occurred. Regular screening is required to detect diseases in its earliest stage.

- Hypertension : check blood pressure at least annually
- Obesity and malnutrition : measures weight and height at least annually
- Visual deficits: Routine screening with a snellen chart annually
- Hearing impairment: it is recommended to periodically questioning older adults about their hearing abilities annually.
- Dyslipidemia : Patients with prior MI or angina should be screened for lipid abnormalities annually.

Tertiary Prevention

Definition: Tertiary prevention refers to interventions designed to arrest the progress of an established disease and to control its complications.

7.8.3 Rehabilitative Services

Definition: Rehabilitation is a treatment designed to facilitate the process of recovery from injury, illness or disease to normal condition as possible.

1. Eating a healthy diet

- Especially rich in minerals and vitamins so as to provide necessary protection to the bones and from other host of illness too
- Includes also adequate water consumption

Four Simple Rules For Elderly Diet

- Divide the daily food intake into 3 – 4 small meals.
