5. Even if your child seems really sick, don't give more medicine than the label says. It won't help your child feel better faster, and it may cause harm.
6. Read the label and know what's in the medicine. Check the active ingredients listed on the label.
7. Make sure you don't give your child more than one medicine with the same active ingredient, because it puts your child at risk for an overdose.

9.10.2 Get Rid of Medicine Safely

1. Clean out your medicine cabinet. Reduce the risk of kids getting into medicine by getting rid of unused or expired medicine.
2. Many communities have a medicine take-back program. This is an easy way to get rid of your unused or expired medicine.
3. To dispose of it yourself, pour the medicine into a sealable plastic bag. If the medicine is a pill, add water to dissolve it. Then add kitty litter, sawdust or coffee grounds to the plastic bag.
4. The Food and Drug Administration (FDA) says that the drugs which are so dangerous , should be flushed down the toilet.

9.11 ROUTES OF ADMINISTRATION

HHLGM7

A route of administration is the path by which a drug, fluid, poison or other substance is brought into contact with the body. For instance, some drugs are destroyed by stomach acid if they are taken by mouth. So, they may have to be given by injection. The principle method of giving drugs is by mouth, and the doses which are not otherwise specified are assumed to be oral doses.

The route used to give a drug depends on three main factors:

- The part of the body being treated
- The way the drug works within the body
- The formula of the drug

Guidelines for administering medication
Full name, address, license number, phone number of prescribing physician
Name of medication
Date of order
Strength and dosage of drug
Frequency
Indication
Stop dates if applicable
Physician signature
Verbal orders should be written correctly in a separate Paper and signed.
