4	Intravenous	➢ Dependable and reproducible effects ➢ Entire administered dose reaches the systemic circulation immediately ➢ The dose can be accurately titrated against response	➢ Requires a functioning cannula ➢ More expensive and labour intensive than other routes. ➢ Cannulation is distressing to some patients, especially children ➢ Cannulae are prone to infection ➢ IV injection of drugs may cause local reactions
5	Topical	➢ Easy ➢ Non-invasive ➢ High levels of patient satisfaction	➢ Most drugs have a high molecular weight and are poorly lipid soluble, so are not absorbed via skin or mucous membranes ➢ Very slow absorption
6	Inhaled	➢ Very rapid absorption due to the huge surface area of the respiratory endothelium ➢ Bronchodilators and inhaled steroids can be targeted to lungs with low levels of systemic absorption	➢ Bioavailability depends on patient's inhaler technique and the size of drug particles generated by the delivery technique

9.12 RIGHTS OF DRUG ADMINISTRATION

It is the responsibility of the nurse to understand the basic concept of safe, therapeutic and rational use of drugs. Healthcare providers are trained in all of these issues. In fact, many healthcare providers keep in mind the "Eight rights" when they administer drugs. But the recent advancements says depending upon the institutional policies these may vary in number.

- ❖ Right drug
- ❖ Right patient
- ❖ Right route
- ❖ Right dose
- ❖ Right frequency/time
- ❖ Right response
- ❖ Right reason
- ❖ Right evaluation
- ❖ Right education
- ❖ Right documentation
- ❖ Right to refuse
- ❖ Right principle of care
- ❖ Right prescription
- ❖ Right nurse clinician

STUDENT'S ACTIVITY

Visit a pharmaceutical company and Visit a medical shop and prepare a report.
