of absorbent dressing. This method of application will effectively clean the infected and necrotic wounds

- **Pressure dressings:** When there is danger of bleeding or when there is oozing from the wound, a pressure dressing may be applied. It is a thick sterile pad made up of gauze or gauze cellulose applied with a firm bandage, Elasto plasts or binder can be used
- **Non-adherent gauze dressing:** Such as TELFA are used to cover clean wounds. Telfa gauze has a shiny, non adherent surface that does not stick on incisions or wound opening but allows drainage to pass through the softened gauze above
- **Self adhesive transparent film**: It acts as a temporary second skin. It is ideal for small superficial wounds which do not require debridement

Purposes:

1. Protect the wounds from contamination with micro-organism
2. Promote healing by absorbing drainage and debriding a wound
3. Support the wound site as a splint
4. Prevents the client from visualizing the wound
5. Promotes thermal insulation to the wound surface
6. Maintenances of high humidity between the wound and dressing
7. Provides mental and physical comfort for the patient

Articles required:

A sterile tray containing

1. Artery forcep – 1
2. Dissecting forcep – 2
3. Scissors – 1
4. Sinus forcep – 1
5. Probe – 1
6. Small bowl – 1
7. Safety pin – 1
8. Gloves, masks and gowns
9. Cotton balls, gauze pieces, cotton pads etc as needed

10. Slit or dressing towels

Unsterile tray containing:

1. Cleaning solutions – if needed
2. Ointment and powders – as ordered
3. Vaseline gauze in sterile container
4. Ribbon gauze in sterile container
5. Swab sticks in sterile container
6. Transfer forceps in a sterile container
7. Bandages, binders, pins adhesive plaster and scissors
