or non-vegetarian. If a person does not like particular greens, it can be tried in a different form or substituted by equally nourishing food

- **Planned meals should provide variety**: If the meals are monotonous it is not consumed. Variety can be introduced in colour, texture and taste
- **Meals should give satiety:** Each meal should have some amount of fat, protein and fiber to get satiety. Meals should be planned in such a way that intervals between the meals is also considered

The word 'nutrition' comes from the word 'nourish' and it includes all the ways in which the foodstuffs we eat are absorbed by the body for the growth and development, energy and good health.

When a person does not eat the right nutrients in right quantity he or she is malnourished and we call this condition as malnutritions.

Here is comparison of the effects on the people of good nutrition and malnutrition.

Good nutrition	Malnutrition
1. Correct weight for height and age	1. Increased /decreased weight and height not appropriate to age
2. Strong muscles and straight limbs	2. Weak muscles and bowlegs or knock-knees
3. Smooth, clear skin and mucous membranes	3. Dry skin
4. Healthy, bright eyes, clear sight	4. Dull eyes, night blindness, poor sight
5. Hearing well	5. Poor hearing capacity
6. Breathing unobstructed	6. Mouth breathing and adenoids will be present
7. Teeth well formed and free from dental caries	7. Malocclusion of teeth, dental caries, spongy gums
8. Tonsils are normal and free from infection	8. Tonsils are enlarged, often infected
9. Erect posture in sitting, standing and walking	9. Abnormal gait, twisted spine, protruding abdomen
10. Nerves steady, expression calm and cheerful, quick to learn	10. Nervous, anxious, irritable, slow to learn
11. They are energetic	11. Tired and restlessness
12. Good resistance to infections	12. Poor resistance to infections

Meal planning

- Meal planning can be defined as taking the time to plan nutritious meals for a specified time. To plan therapeutic meals, the groups and classes of foods must be put into consideration
- Meal planning is also the implementation of the principle of nutrition in one day diet in an appetizing manner
