- Have patient wear glasses and/or hearing aides
- Activate bed alarm

- Ask family to sit with patient
- Alert other staff to be observant
- Move patient to a room near the nurse's station
- If the patient is interfering with his medical equipment
- Educate the patient not to touch the treatment device
- Place the device out of site if possible
- Cover the device (i.e. wrap I.V. site with Coban or Kerlex)

Alternatives :

- Increase observation

TYPES OF RESTRAINTS:

Definition: Physically that restrict a client's movement. E.g: table fixed to a chair or a bed rail that cannot be opened by the client.
