

- Heart failure
- Rupture of the heart
- Phlebothrombosis
- Angina pectoris

A thallium stress test is a nuclear imaging test that shows how well blood flows into your heart while you're exercising or at rest. This test is also called cardiac or nuclear stress test.

During the procedure, a liquid with a small amount of radioactivity called a radioisotope is administered into one of your veins .The radioisotope will flow through your bloodstream and end up your heart .once the radiation is in your heart ,a special camera called gamma camera can detect the radiation and reveal any issues your heart muscles is having.

3.3.3 Anaemia

Normal red blood cells | Sickle cells anemia

Anaemia is a condition in which there is a reduction in the number of red blood cells and a deficiency of haemoglobin resulting in decreased oxygen-carrying capacity.

Causes

1. Blood loss related to trauma
2. Decreased production of platelets.
3. Increased destruction of platelets
4. Decreased number of clotting factor.
5. Impairment of RBC production due to nutritional deficiency, (e.g Iron deficiency, folic deficiency, Vitamin B12 deficiency, Vitamin B6 deficiency).
6. Decreased erythrocyte production, bone narrow depression.
7. Increased erythrocyte destruction due to
